Summary

Full-stack software engineer with nearly 4 years of experience building scalable, reliable SaaS, including multi-tenant healthcare platforms. Works across C#/ASP.NET and Node.js back-ends and React/TypeScript front-ends, with relational data modeling, automated testing, and Azure CI/CD throughout.

Experience

JF Develops Remote
Founder / Independent Consultant *Oct 2025 – Present*

- Partner directly with clients from initial requirements through launch, translating business goals into technical decisions on architecture, data modeling, and delivery timelines.
- Build and maintain production TypeScript/React applications with serverless back-ends (Convex, Cloudflare Workers), covering component design, database schema, automated testing, and CI/CD deployment pipelines.
- Provide ongoing support for live client applications, shipping new features and resolving bugs while communicating trade-offs and progress directly with non-technical stakeholders.

Henveny Brooklyn, NY (Remote)
Software Engineer *Jan 2026 – Jun 2026*

- Designed a flexible relational data model for a matchmaking platform, capturing complex family relationships and turning nuanced business rules into configurable system behavior.
- Built admin tooling in Next.js, NestJS, and PostgreSQL for merging duplicate contacts and managing family-linked records, validated against thousands of records.
- Hardened platform reliability with data-integrity safeguards, CI pipeline improvements, and zero-downtime deployment health checks.

Febyte Corp. Garden City, NY (Remote)
Software Engineer *May 2023 – Oct 2025*

- Built C#/ASP.NET back-end services and led front-end development for a multi-tenant healthcare SaaS platform serving multiple healthcare providers, translating client requirements into responsive, accessible React interfaces.
- Designed and implemented an HTTP-triggered Azure Function that processes hundreds of thousands of entries per run.
- Redesigned a monolithic preferences system into dedicated relational tables in SQL Server, improving maintainability and optimizing T-SQL query performance.
- Expanded automated testing with Playwright and Jest under a zero-failing-test policy enforced in Azure DevOps CI/CD, and validated CSP security policies with security teams.
- Troubleshot app failures with Azure Application Insights, often tracing root causes to Keycloak templating.
- Extended the platform's JWT authentication handler to support an additional token claim.
- Implemented custom Java-based logging in Keycloak to support RFC 3339 timestamps not natively provided.

Ecom Diversify Ocean Township, NJ (Remote)
Junior Software Engineer *Jan 2023 – May 2023*

- Engineered a real-time monitoring application in Node.js and TypeScript on a Linux server, integrating Slack and Asana APIs for team communication and project tracking.
- Built React components and data visualizations for internal dashboards, covered with Jest and React Testing Library.

Projects

- **@jfdevelops/multi-step-form** (TypeScript, React): type-safe multi-step form library on npm. Framework-agnostic core plus React bindings, with schema-driven type inference, Standard Schema validation, and reactive localStorage persistence. Released via Changesets and GitHub Actions CI across 54 versions.
- **@jfdevelops/react-layout** (TypeScript, React): npm library for resource-based page layouts in admin and CRUD apps, using composable slots and a type-safe prop builder.
- **MaterialUIHelper** (C#, .NET 8): library that translates MUI X Data Grid filter models into LINQ expressions, applying client-supplied filters to in-memory collections or EF Core `IQueryable` sources through one extension method with deferred execution.

Education

SUNY Farmingdale May 2023
B.S. Computer Programming and Information Systems

Skills

Languages: TypeScript, JavaScript, C#, Java, SQL, T-SQL
Frameworks: React, Next.js, .NET Core, ASP.NET, EF Core, Node.js, NestJS, TypeORM, REST, JWT
Tools: Azure, Azure Functions, Azure Blob Storage, Application Insights, Azure DevOps, Git, GitHub Actions, Docker, Linux, SQL Server, PostgreSQL, Jest, Playwright, Postman, Keycloak, Microsoft Entra ID, Material UI, PM2
Practices: Agile/Scrum, CI/CD, Microservices, MVC, Automated Testing
